

COUGAR★FUEL SYSTEMS

The Lone Star in Critical Fuel Systems

Cougar Fuel Systems™ is the industry leading solution for all of your commercial and institutional critical fueling applications. Complete and comprehensive IFC, UL and FM Compliant systems for Emergency Generator, Boiler and Fire Pump installations, we are truly the only source you will need for providing your Customer with a safe and reliable installation. Our packaged systems are built with Code compliance, safety and the end-user in mind, featuring robust construction, all required safety devices and features that allow system operational assessment at a glance. **Cougar Fuel Systems™** also incorporate many options/features not currently seen in our industry today including fully enclosed, double contained systems starting at the main tank all the way through the day tank assemblies.

EFTS Series

Fuel Transfer Systems

While our Fuel Transfer Systems are available in many sizes to meet your project needs, even the smallest unit incorporates all the features end users appreciate, including a fully enclosed cabinetized package. Our transfer systems feature 100% redundancy and are constructed with NFPA compliant devices and materials, unlike many systems seen in today's market.

Fuel Maintenance Systems

Fuel Maintenance Systems are in high demand due to the number of generator failures during storm and other power outage events. **Cougar Fuel Systems™** provides an automatic means of maintaining the fuel system per NFPA and engine manufacturer requirements. Our systems feature a wide range of capacities and some of the most stringent specifications on the market today.

"Clean Dry Fuel"

FMS Series

Fuel Specialties

Cougar Fuel Systems™ product line includes all related fuel specialty devices required for your main storage tank, day tank and fuel pipeline needs including: Remote Fill Stations, Overfill Prevention Valves, Misc. Tank Trim, Anti-Siphon Valves, Fire Safety Valves and tank selection valves just to name a few.

Controls

Cougar Fuel Systems™ also feature highly advanced and flexible control platforms to enable the end-user to seamlessly integrate the entire fuel system through a single communications based loop. This greatly decreases installed cost without a sacrifice to system information or redundancy. Our **UL 508a**, Ethernet capable controllers can bring together a complete system for main tank operations, transfer pump operations, filtration, generator and day tank operations and relay all system conditions to your Building Automation System on or off-site in real time.
